

NANO UREA

Key Features

LIQUID FOLIAR FERTILIZER

High crop yield is essential, supported by vegetative growth from Nitrogen.

Nano Urea's slow release and high Nitrogen Use Efficiency (80%) enables consistent crop yield, better health and growth.

Specifications

20% NITROGEN

Application Dose

1.5 Litre / Hectare

or

500 ml / Acre

2 Applications or
as per recommendation

1st Application

2nd Application

**Sowing/
Germination**

Tillering

Vegetation

**Flowering/
Maturity**

Before Harvest

HOW IT WORKS

Nano Technology

This advanced technology has redefined fertilizer market.

Enabling farmers to adopt an environmentally friendly practice.

Its compatibility with most Agrochemicals makes it ideal for overall crop health.

EASY, EFFICIENT, EFFECTIVE.

It can be used with Knapsack Sprayers, Drone Sprays and Power Sprays.

Slow Release

The nano particles are able to penetrate the leaf surface to store itself in the stomata.

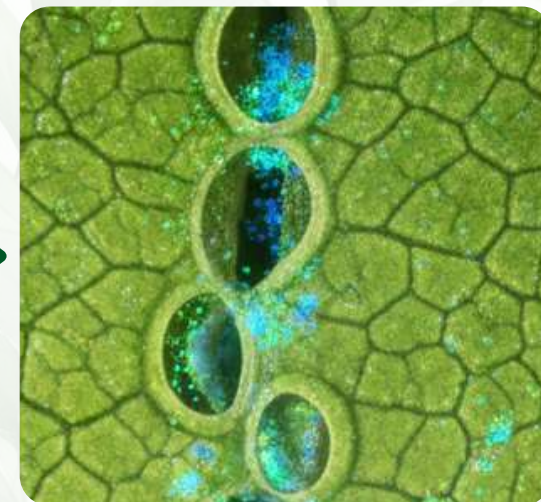

The stored particles then slowly release into the crop as per the crop's requirement ensuring consistent results.

LIQUID SPRAY

ABSORBED IN LEAVES

STORED IN STOMATA
